25. Full-body scanner machines at airports

Some airports are now using full-body scanner machines that produce a detailed picture of travelers and items that are hidden on their bodies. It might have detected the explosives that were meant to be ignited on the Christmas Day Northwest flight from Amsterdam to Detroit. But it also produces naked images of travelers and many privacy advocates have objected to them. The scanners would not detect items within a persons body. What is your opinion of the use of full-body scanners at airports?
